ABSTRACT:

Since the independence of the country, agriculture sector has remained the priority for each successive government. Every government has set its agenda for the development of community and raising its living standard. Several studies indicate the pervasiveness of high poverty occurrence in rural areas. The cooperative societies are intended to enhance greater participation o f population in the process of social development. The present study focuses on the role of cooperative societies in the agricultural development of the country. The study conducted based upon the data collected from the literatures and from primary sources of evidence. A survey of 113 farmers of Haridwar district was carried out with the help of primary data collected from a survey instrument (questionnaire). The study signifies that cooperative institution has the important role for raising the standard of living and making them self reliance and independent. Research highlights the role of cooperative institutions in the agricultural development of the region. Problem faced by the farmers in availing the facility of cooperatives and some important suggestion to make the institutions more effective. Some of the challenges faced by farmers in associating with cooperative institutions are also highlighted.

KEYWORDS: Cooperative institutions, agricultural credit, priority sector lending, Social Development.

INTRODUCTION:

The development of community as a whole through a cooperative movement has been present in the agenda of every successive government since independence. Eradication of poverty and raising the living standard by reducing malnutrition remained the main focus of every successive government through its plan and rural development policies. Poverty condition, literacy and resource constraint the root cause forcing rural masses to struggle in finding means for economic and social change. We will fail to bring change in rural development without engaging all segment of society. The objective of socio economic development cannot be achieved in the absence of people's access to credit. Cooperative financial institutions play an important role in meeting the needs of people through extending credit facilities and empowering people in their own development and community as a whole. Cooperative societies also play an important role in making former self reliance reducing their burden from village money lenders through credit extension and including them in different developmental activities.

An access to credit offered by cooperation financial institution helps a lot to poor people in controlling their lives. Proper management of small and marginal land asset can be crucial to the poor former and other people who live in an uncertain condition. A small change in their expenditure

completely disturbs their budget and affects their performance and productivity. The absence of credit facilities affects their income, shelter and food. Cooperative support is needed for such people to overcome poverty. Emphasis should be made through cooperative institution in raising their ability to borrow, save, invest and protect their families against risk. Government intervention for direct access to financial services and credit need can allow very poor people to progress from hand-to-mouth survival to planning for the future, acquiring physical and financial assets, investing in better nutrition, health and education.

Since the inception of cooperative concept, Cooperative financial institutions were initiated under the Cooperative Society Act with the aim to develop the agricultural development processes and participating in rural development. The cooperative financial institutions are not limited in their function in providing production requirement but perform several other function that need to be explored and strengthen for socio economic development. The present study focuses on the cooperative societies and their role in the agricultural development of the country. Accessibility of researcher with the farmers of Haridwar district has motivated to choose them for the proposed study.

REVIEW OF RELATED LITERATURE

Co-operative financial institution is having a long history in India and playing a significant role in the society particularly to the farming community. Extension of cooperative concept in agricultural cooperatives or farmers' cooperatives where farmers pool their resources for mutual economic benefit has played an important role in raising the living standard of rural formers. Primarily, Agricultural cooperatives divided into two segments; one is agricultural service cooperatives that render services and take care of various services to their individual farming members. And the other is agricultural production cooperatives, where production resources such as land or machinery are pooled. Like many other countries, cooperative in India also started as a mean of ensuring livelihood for poorly equipped people with marginal resources. The principle of mutual help, which is the basis of co-operative organization, creates a feeling of self-reliance in a democratic way of life. In a study on topic "The impact of cooperative finance on agriculture in Vikramjot Development Block, Basti district, Uttar Pradesh, India, it was found that cooperatives can have a favourable impact on agricultural development. Pal & Singh, in their study found that in spite of several structural changes in credit institutions and forms of rural credit in the post-Independence period, the exploitation of the rural masses in the name of credit facility is one of the most pervasive and persistent features of masses in rural India. Cooperative society is a form of business organization owned and operated by a group of individuals for their mutual benefit. Cooperative enterprises are the focus of study in the field of cooperative economics. In a group of studies it was found that large farmers availed larger share of credit and small farmer could avail very small share of credit. Pandey (1972), National Council for Applied Economic Research (1974), Reddy (1980) and Singh (1986) in many cases it was found that Unproductive loans were common among non-cultivators. Looking at the credit uses, it was found that uses of credit affected by the regional disparities as is evident from the studies conducted by Athavali et. al. (1971), Reserve Bank of India (1975), Dhongade and Dangat (1978), Gupta and others (1978), and Panda (1985).

OBJECTIVES OF THE STUDY

Do the ownership and participation in cooperative activities means a lot about control of a cooperatives? What are the members reasons for cooperation and what are their opinion regarding cooperative action? Do the cooperative operate n the way which is consistent to the interest of the farmers? These are such questions need to be answered. With these questions in mind present study was taken up with the following objectives

- 1. To Review the growth and emergence of cooperative financial institutions.
- 2. To analyse the role of cooperative financial institutions in agricultural development of India with specific reference to Uttarakhand.

3. To suggest a futurist approach to improve the role of cooperative institution in agricultural development of India with specific reference to Haridwar region of Uttarakhand

RESEARCH METHODOLOGY

The present research is based on primary as well as secondary data collected from both primary and secondary sources. Several sources like books, journals & research paper websites and other relevant source were reviewed for drafting theoretical concept of the study. Survey instrument was used for collecting primary data. Construct for the study was development on the basis of secondary literature. Measurement variables were developed in the form of statement and questionnaire was designed for investigation. The survey was conducted with the help of questionnaire on approximately 150 respondents covering different villages of Haridwar district. After editing 113 responses were found fit and taken for the study. After collection data was systematically arranged, tabulated and appropriate analysis was done. Some of the statistical technique like Factor analysis, and Descriptive statistics are used to analyze the data.

RESULTS

The attitudes of farmers towards their cooperative are worth to appreciate because they are the cooperative's reason for being as members. Theoretically members are the owners of the cooperatives who can control or at least influence management through participation in the meeting as well as their transaction with the cooperative firm.

Table 1 indicates the Demographic Characteristics of Respondents.

VOLUME - 8 | ISSUE - 7 | APRIL - 2019

Number of earning	Only One Members	26	23.0
members in family	Two Members	49	43.4
	three members	34	30.1
	Four members	4	3.5

Demographic description presented in the above table reveals that majority of the respondent's i.e. 54% fall in the age group of 25-35. The sample is dominated by the male respondents which account for 94.7%. Majority of the respondents i.e. 56.6% are from married category. The analysis reveals that 63.75% of the sampled farmers are having family size of 4-6 members. The information in respect to educational qualifications of the respondents indicates that majority of the farmers are intermediate, 15% are graduates and 31.95% are post graduate. However 12.04% respondents were not having any formal education. It may also be observed that 70.8%, 14.2%, .9%, 12.4% and 1.8% respondents were having monthly income of Rs10000PM, Rs10000-20000PM, Rs20000-Rs30000PM, Rs30000-Rs40000PM, more than Rs50000PM respectively. This signifies that the sample is dominated by those respondents who are having the monthly income of Rs.10000PM. analysis presented in the above table reveals that sample is dominated i.e. 43.4% by those members who indicate that there are two earning member in their family. 23.0% respondents revealed that there is only one earning member. Almost one third 30.1% respondents indicated that there are three members earning in the family. 3.5% indicated four members who are the earning member in the family.

Table8: Meeting Financial Needs:

There is urgent need to assess the issues related to need and functioning of various institutions in agriculture sector and assess whether the growing financial need of farmers are met with the help of present cooperative financial societies. With this in to mind an attempt was made to know whether all the financial needs of the farmer are met with cooperative institution. The analysis reveals that very few respondents in the sample are of the opinion that their financial needs are met with cooperative institutions as it was indicated by 20.4% respondents in the sample. Around two third respondents (61.1%) released with some times their agricultural financial need are materialized with cooperative financial institutions. 11.5% respondents say it is rarely met where as 7.1% respondents revealed that it is never met. It signifies that growing financial requirement and cast escalation of agricultural inputs are not met by the cooperative financial institution.

Table9: Source of Agricultural Credit:

Over the last few decade large number of financial institution like Non institutional Credit Agencies and institutional Credit Agencies have came into market to help farmers in meeting their fund requirement. An attempt was made to know from the respondents with whom they want to take loan for the development of their agriculture. The study projects that 40.7% respondent prefers to take loan from cooperative financial institutions. 33.6% respondent wants to take loan from private money lenders. Personal savings and relative together account for 1.8% respondents in the sample and 22.1% respondents revealed that they prefer to take loan from banks. Analysis highlights that in spite of other resources majority of them takes loan from cooperative banks.

 Table 17: Overall satisfaction with services of Cooperative financial institutions

Total

satisfied to a little extent

Not satisfied at all

Customer satisfaction is the end objective of any organization for long term growth and sustainability. The study reveals that majority of the respondent are satisfied with the overall services of cooperative banks to some extent. 6.2% Customers are highly satisfied, 45.1 % are satisfied to some extent, 26.5 % are satisfied to considerable extent, 13.3 are satisfied to a little extent and 8.8 % are not satisfied at all.

CONCLUSION

Cooperative banks are expected to play a very important role in the economic development of rural market in the coming days. Emerging rural market will offer a lot of business opportunity. Cooperative Financial institutions like cooperative banks have a very extensive access to the rural market and is playing catalyst role in the agricultural development of the region. Study indicated that majority of the farmers are satisfied with the loan services offered by cooperative banks but they are not satisfied with the staff behavior. Rigidness of staff behavior and Lengthy Legal Procedure (58.1%) are forcing to farmers to move away from cooperative bank and moving towards commercial banks for their financial needs. This study showed the diverse opinion of farmers toward the service of bank and the behavior of employees in rendering services. Cooperative banks are the oldest form of financial institution, but compared to other private and public banks co-operative banks are lacking in the adoption of technology and modern equipment. In a developing State like Uttarakhand with huge opportunity, cooperative banks needs a corrective measures in its services and managing the factors like courteousness and Sincerity of staff, enhancing Consumer convenience, minimizing the Process cost and flexibility in choosing EMI, increasing the Responsiveness, being Empathetic, improving their Credit Policy as well as Repayment policy and adjusting the Tenure of Loan will definite help in gaining competitive edge and expanding their customer base.

SUGGESTIONS:

On the basis of study following suggestions are made to improve the functioning of cooperative and attract the farmers in their favour.

- Cooperative must initiate the behavioural training program to improve customer relationship and stay competitive.
- Cooperative should expand its activities and must find key result area through which services can be improved.
- Simplification of the procedure is the urgent need to improve the process of cooperative financial institution.
- Cooperative must initiate training and educating the farmers so as to influence and change their behavior accordingly.
- Banks must simplify its procedure to help the farmers.
- Cooperative financial institution should increase their capital and increase the loan limit and other activity for helping farmers.
