

IGNORED ENERGY SOURCES

Sanjay K. Tupe

Assistant Professor, Department of Physics, Kalika Devi Arts,
Commerce & Science College, Shirur (k.) Dist. Beed.

ABSTRACT

Now a day's electricity is very important to improve the standard of living of human being as well as lightning in the Villages, Towns & Cities. It should be available at minimum cost & contentiously. This model / Paper is addresses the information about the artificial / manmade ignored energy Sources.

KEY WORDS: ignored energy resources, electricity generator.

INTRODUCTION

Nature has provided us lot of energy sources and we had already concentrate on these such as hydrostatic power station, Thermal Power Projects, Nuclear Power Station and Solar Energy, Wind Power etc. We had forgotten the sources which we made.

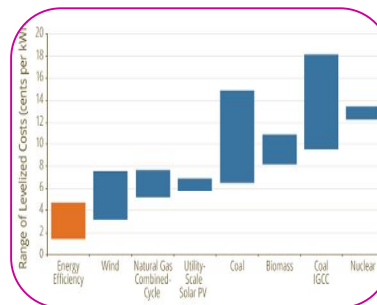

In India there are lots of water tables from which we are going to take the water for various purposes continuously with the help of sufficient capacity water pumps. Outlets of these water pumps become the energy sources.

In villages, towns, cities & metro Politian cities there are number of water tanks of various capacities are constructed at certain sufficient height. Hence the water can be supply to the peoples (Costumers) by natural gravity. The pipe inserted in water in the water tanks its end becomes energy source. Through the pipe which water is supply to the citizens that is also the energy source.

In metro Politian cities drainage line is properly planed and it is outleted in the river or Sea. The outlet of these drainage systems becomes the energy source. In some cities on the certain points drainage water is collected and then it is outleted by using the electric pumps. The outlet of these pumps is the energy source.

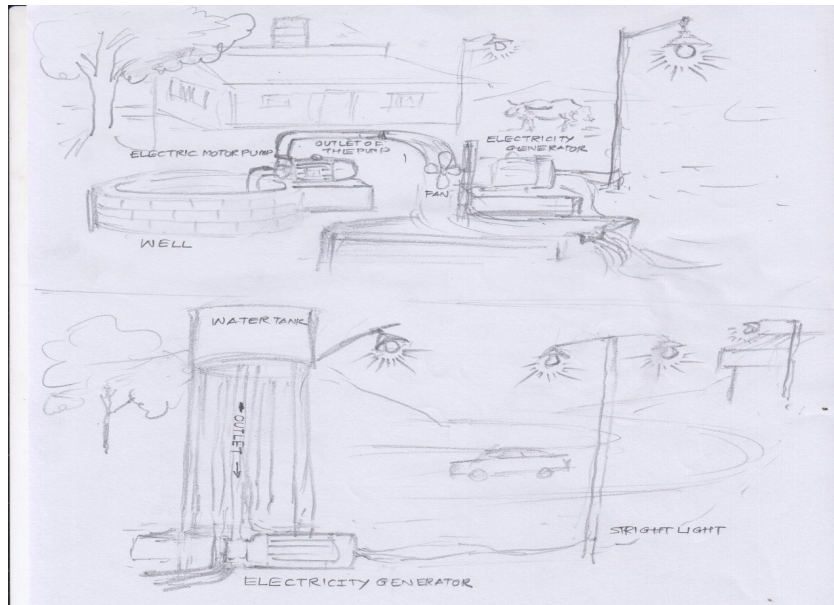

Even though the water tanks at the roof of the huge buildings, complex and the houses are also the energy sources.

WATER SOURCES SHOWN IN FOLLOWING DIAGRAMS.

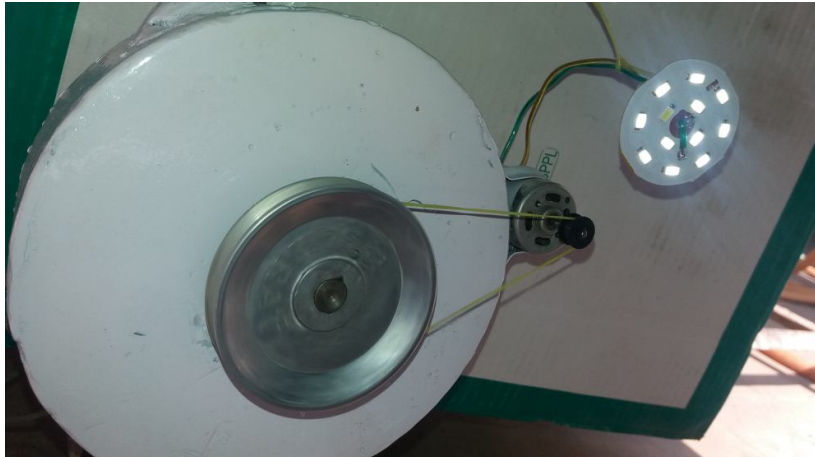

Experiment: - Actual instrument, Experiment & Output is as shown in following pictures.

Our concept is shown in the above figure

The LED gloves in above picture is experimental instrument is connected to the tap water in home

Concept: - “When there is relative motion between Magnetic field & Electric Conductor develops electricity”. From this it is clear that there should be some source to keep the relative motion between them. There are number of sources which I had maintained. These can contentiously generate the electricity. [1, 2, 3].

The above instrument is user-friendly when it will be constructed at large scale. Cost effective, Pollution free, requires less space and no need to apply extra energy source.

CONCLUSION: -

If we develop the various capacity of electricity generators as per the capacity of available energy sources, it is helpful to enrich the electric energy source of our nation. There are lot of farmers in our country their water pumps are the resources for 24 hours. With the help of net metering system they can empower themselves as well as helps to enrich the electric power of our country. These type of generators are also helpful for to overcome the problems of load shedding.
