

## ADVENT OF DIGITAL MEDIA AND IT'S CONSEQUENCES ON THE FUTURE OF PRINT MEDIA

**Prof. K. Shiva Shankar**  
Professor , Department of Mass Communication ,  
Telangana University.

### ABSTRACT:

*"First India" has taken to advanced media in a major way, and devours their news on applications and computerized destinations over a scope of gadgets and stages. Be that as it may, "second India" still expends media in a customary way, transcendently through printed press. Understanding papers and a solid defensive culture with the expectation of complimentary press goes back over 160 years to when India was under British provincial rule. India is home to the Times of India, perhaps the most seasoned paper on the planet, and the world's biggest flowed paper, however it isn't English-language papers that are pushing print press development, yet non-English vernacular papers.*

**KEYWORDS:** *Diaspora, migration, politics, identity, feminism, subordinate, ethnic minority, voiceless and frustration.*

### INTRODUCTION:

Since the approach of the web and the flood of internet based life, print is said to be 'dead'. Today everything is versatile and news is constantly a second past the point where it is possible to refresh their perusers. In what capacity can a static, physical and moderate media alter itself to get by in a remote and computerized world, refreshing each second? When Steve Jobs uncovered the iPad in 2010 as a gadget that satisfied the hole among cell phones and PCs, he realized that it would change all is thought about electronic and print media. It was said that the iPad would be the salvation of papers and magazines yet in addition, with Kindle, could make print books out of date. Be that as it may, what is the genuine truth? This paper will attempt to address this inquiry, looking at how three customary print media are carrying on and adjusting in the computerized world.

This leaves India in a one of a kind circumstance, in which TV, computerized and paper are altogether creating simultaneously, not at all like in the remainder of the reality where advanced has destroyed everything else.

There are three sorts of organizations in the Indian media division:

Customary old fashioned vernacular distributions that take into account local and mofussil markets. These papers are not concentrating on computerized and are in no race to change due to their broad readerships and proceeded with high course month on month.

There are 20-25 bigger organizations spread crosswise over nation — the Times of India, the Indian Express and Hindu to give some examples — that are driven by western-instructed, English-talking chiefs. These distributions have seen indistinguishable media downturn from the remainder of the world, and have their sights set on re-designing for the looming change — yet despite everything they have immense readerships and beneficial plans of action.

There is the new school of media new companies, with no inheritance, however that is substantially more innovatively light-footed, and intends to make another absolutely computerized media.

Dissimilar to in the west, where the advanced blast put even the greatest, best-supported heritage productions on the back foot, the three unique media bunches in India are creating one next to the other, passing each other like ships in the night.

Each gathering has advantages and disservices. New fire up players are working with the most up to date innovation out there, they are well-financed, bid to "first India" and are not kept down by old attitudes. Nonetheless, they come up short on an impression, and are attempting to develop their crowds.

Until this point in time, media change is being backed off by the way that India still has one of the world's most minimal degrees of web immersion.

On the other side, conventional and provincial papers have monstrous and drawn in spectators and a relentless pay from deals and promoting, yet are kept away from modernizing by inheritance innovation and obsolete mentalities. Conventional papers acquire most from print media publicizing, and have a readership used to perusing physical papers. While they may perceive the requirement for change — in view of what has befallen the media in the west — a paper is just in the same class as its perusers, and, as it's been said, it is hard to pivot a supertanker.

Be that as it may, not at all like in the west, where media productions had to progress quickly and give new things to contact crowds a shot a scope of gadgets and mediums, Indian media organizations appear to have the advantage of time on their side.

This battle is probably going to proceed for the following five to 10 years, until new computerized players have increased a bigger group of spectators, and until the growing "working class" in India genuinely embraces cell phones and advanced innovation. Similarly as youngsters get papers in their own dialects now, as cell phones become less expensive and increasingly open, they will lift them up as well.

Not at all like in the western world, where most clients got to the web by means of PC before innovation progressed to the phase of cell phones, in India we are seeing an innovation "jump" in which most of "second India" has skipped PCs and PCs and are getting to the web just because by means of cell phones. Ongoing thinks about foresee there will be 249 million versatile web clients before the finish of 2016, and expect development at in excess of 50 million individuals for each year until 2020.

As "second India" turns out to be increasingly advanced, they will unavoidably start to give more consideration to computerized media, and after some time the media downturn will grab hold in India as it did in the remainder of the world. The thing that matters is that India has around three to 10 years to plan for this, and can incline toward positive models and new adaptation models from the U.S. also, the west to explore the time of progress.

Another advanced scene implies expanded rivalry, however with more than one billion potential purchasers, the advantages and gains to productions who intend to make the change ought to merit the exertion.

### **1. Print will continue to be valuable where there is a physical customer presence.**

Print is as of now an objective explicit medium and will turn out to be all the more so. It bodes well where you come in physical contact with your clients, similar to a retail location or occasion. For instance, our restorative installment plan items bode well in a specialist's lounge area so we put resources into print there. What's more, regular postal mail is the best method to arrive at senior residents who will peruse long-duplicate mailers.

### **2. Luxury consumers will still value tangible ad platforms.**

Gleaming magazines and significant distributions hold a specific cachet that online doesn't accomplish. There is exacting load to your essence. This unmistakable stage resounds well with

extravagance purchasers and customers - try to locate an integral balance among computerized and print inside some random battle for a multidimensional methodology.

### **3. AR will give print ads a place in seamless omnichannel brand experiences.**

With individuals turning out to be increasingly more oblivious in regards to computerized publicizing strategies, print offers an elective medium to interface with your crowd on their terms. Advances in innovation like AR and picture acknowledgment will empower print advertisements to be the initial phase in a consistent omnichannel brand understanding.

### **4. Print will need to complement and encourage digital interactions.**

In the event that your intended interest group peruses print magazines as a normal piece of their day, there is as yet motivation to consider print advertisements in your promoting blend. In any case, you have to change the desires for moves your crowd will make. Print advertisements will be increasingly powerful on the off chance that they are a supplement to your computerized crusades as of now in play and allure perusers to connect with your image on the web.

### **5. Offline entities and influencers will reengage consumers with print media.**

Print media is in a condition of advancement as it finds better approaches to reconnect purchasers through associations with disconnected substances. As this development happens, it will ideally prompt higher readerships. Sadly, on the off chance that you just have one dollar to spend on promoting and need to settle on print and computerized, advanced will consistently win. The compass is far more prominent with advanced publicizing.

### **6. Paper will become cost prohibitive, killing the last print campaigns.**

In the end, the whole populace will have been brought up with the web accessible to them. Papers and magazines may be found in historical centers. The last bastion of print promotions will be regular postal mail, as a physical letter box will be the last spot that print can arrive at that computerized can't. In the long run, that will bite the dust also when all bills are paid on the web and the expense of paper gets cost restrictive.

### **7. Print ads won't make sense in our dynamic screen environment.**

Paper and other static textures don't give the highlights that the eventual fate of promoting will come to rely upon. They are overwhelming, badly designed, unchangeable, inefficient and eventually obsolete. The minute something is printed, it's solidified in time. Spectators need to see clear, vivid, powerful shows that are time applicable down to the moment.

### **8. Print and digital campaigns will be fully integrated.**

Gone are the days when extra spending plan from computerized channels was utilized for print. For greatest effect around an item dispatch or declaration, construct an incorporated advertising effort that brings the best of the two universes together. Use KPIs that supplement the two channels as opposed to assessing them in disengagement.

### **9. Print will allow brands to rise above the digital racket.**

The pervasiveness of advanced media has given print media a weird new power. Consider that it is so uncommon to get a composed letter rather than an email. In case you're attempting to focus on a C-level group of spectators, overlook email - their associate will simply hit erase. Be that as it may, in the event that you take your digital book, print it as a pleasant leaflet and mail it to the executive's office, it may get to their work area and leave an enduring impression.

## 10. Print will remain ideal for hyper-local markets.

There are "yellow page" enterprises that have developed exclusively from hyper-neighborhood print promoting. My industry, private specialists, happens to be one. Including innovation and computerized publicizing has been indispensable to scaling and making new markets and clients. In any case, customary clients still use print publicizing to address their issues and we have to play in that space too.

### The Future of Print Media

Having been in the paper business for two decades, questions are frequently aimed at me about the eventual fate of print media.

Frankly, it torments me to perceive how the print side of things has declined as of late. Some portion of the decay is expected just to mechanical headway while another segment has been self-dispersed, albeit numerous higher-ups in the print media could never let it out.

The Internet has been one of the significant reasons print media has declined in readership in the previous decade. Indeed, even enormous every day papers aren't ready to stay aware of up-to-the-second news that can be found on your PC screen.

The different 24-hour news link stations have additionally assumed a job, however I've never been persuaded you are getting a precise depiction of the news on any of them. You chiefly get an inclination from some political side, however numerous individuals have since a long time ago escaped the propensity for perusing a day by day paper for their data.

They likewise neglect to recognize the truth about one-sided inclusion, essentially in such a case that the inclination supports an individual's political inclining, at that point it is disregarded.

Day by day papers attempted to conform to the occasions with sites of their own, however that additionally prompted the decrease in their print readership. When the forces that-be who run every day papers put the entirety of their substance online for nothing, at that point what motivation did perusers need to purchase the print form?

While maybe not a dinosaur as far as age, I am antiquated with regards to parting with news for nothing. For this current paper's site, there is an equalization. Frequently just segments of stories are set internet controlling perusers to the print form of the paper. This is obviously the keen approach. On the off chance that you are given something for nothing, for what reason would you get it in another structure? You wouldn't obviously, particularly not in the present economy where each penny tallies like never before for most families.

The future for print papers likely rests in network situated distributions like the one you are presently perusing. Bigger papers have never been keen on all the neighborhood updates on where you live, just the irregular things, for example, murders, fires or degenerate government officials.

In any case, papers like this one offer things you will never go anyplace else. Regardless it distributes who is getting hitched, who kicked the bucket, who is conceived, who won the nearby ballgame, what occurred at the routine political gathering and — to the next outrageous — who was captured. We offer news things which we realize our perusers are keen on. All things considered, we live here as you do and that helps give us a knowledge into what you need to peruse.

The ongoing destruction of the print variant of Newsweek magazine finished a decades in length convention. Newsweek consistently offered a solid understanding into national governmental issues and its print void will make it lose an enormous bit of its readership base. At the point when I called to get a discount for my print release (I have no enthusiasm for the online rendition), the client support delegate was stunned regardless I didn't need the magazine to peruse on my PC.

"I bought in to peruse the adaptation that I can really turn the pages," was my reaction. "I think it was a misstep to get rid of your print release."

It will enthusiasm to check whether Newsweek's online rendition endures as long its print version. Something discloses to me it won't.

One thing I know is that the paper you are grasping currently isn't leaving. Luckily, a few conventions keep on living on even with the regularly evolving occasions.

## CONCLUSION

Media-industry is a significant segment for any area, for the most part on account of its huge commitment for the financial advancement. Provincial 'media industry' is referred to more as socio-social change specialist than a 'business venture'. Present paper takes a glance at history and development of print-media in Odisha (in East-India), and surveys its commitments and operational issues, as an autonomous industry. It endeavors to break down the eventual fate of print-media in this electronic age. It takes a gander at the 'perspective change' the 'media business' has experienced, completely especially on account of inventive 'process-upgrades', and e-advertising. The present paper is a contextual investigation examination of the Odia news paper industry.
