**KEYWORDS:** Socio economic status, Aggression behavior.**INTRODUCTION**

The socio economic status has the influence on the not only the physical body it is also influencing the psychological factors among the sports players i.e. self confidence in the sports players also impacted by the socio economic status of their families. The aggressive behavior is concentrated on the low socio economic status sports players.. The locus of control and mental health almost all psychological factors are influenced by the socio economic status in the society.

According to the international dictionary of education SES is defined as person's position in any given group society or culture as determined by education, occupation-, wealth and social class (Thomas, et. al. 1978.) The researchers and other psychologist are defined the aggression is the one of the balance instinct of the sports player, the players are sometimes behave in the rough ways due to disturb the other players or hurt the opponents by physically,

In the sports and games the aggression is the one of the key factor to get the win in the completion in some selective sports and games, the more dominance of aggression will harm the others or disturb the rules and regulation of the games which may lead towards unhealthy sports, the aggressive behavior is the natural instinct in human but the players should use it as boosting the performance in a balanced manner, many sports players are act as roughly in the social or personal life due to the higher aggression in their personality which makes them disturbed person in the society, the aggression is the fire in the sports players personality use it sensibly. Somewhere. Sports may be arranged in a scale according to the intensity and type of aggression inherent in each. In many sports, an individual aggresses within structured rules and

specified conditions. Also, it is a fact that in many sports all out aggression is alternated with periods of total absence of action.

### METHOD

The present study focused on the impact of the socio economic status on the aggressive behavior among the sports players of kalaburagi district, the sample was consisted fifty high socio economic status sports players and fifty low status sports players compared each others in their aggressive behavior.

### The objectives

- To know the impact of socio economic status on the aggressive behavior of sports players.
- To know the significance difference among high and low socio economic status groups in their aggressive behavior.

### The hypotheses

- There would be impact of socio economic status on the psychological factors among the sports players.
- There would be significant difference in aggressive behavior among the high and low socio economic groups of sports players.

### Sample

In the present study the researcher taken one hundred sports players as sample of the study and divided them into high and low socio economic groups equally in number. the sample consisted only male sports players of kalburagi distinct.

### Research Tools

The socio economic scale developed by Rajeev Lochan Bhadhwaj used to measure the socio economic status among the sample of the study, the aggressive behavior scale developed Mathur used to measure the aggressive behavior of the sample groups. The scoring was measured on the basis of manual of the scales.

### Statistical techniques

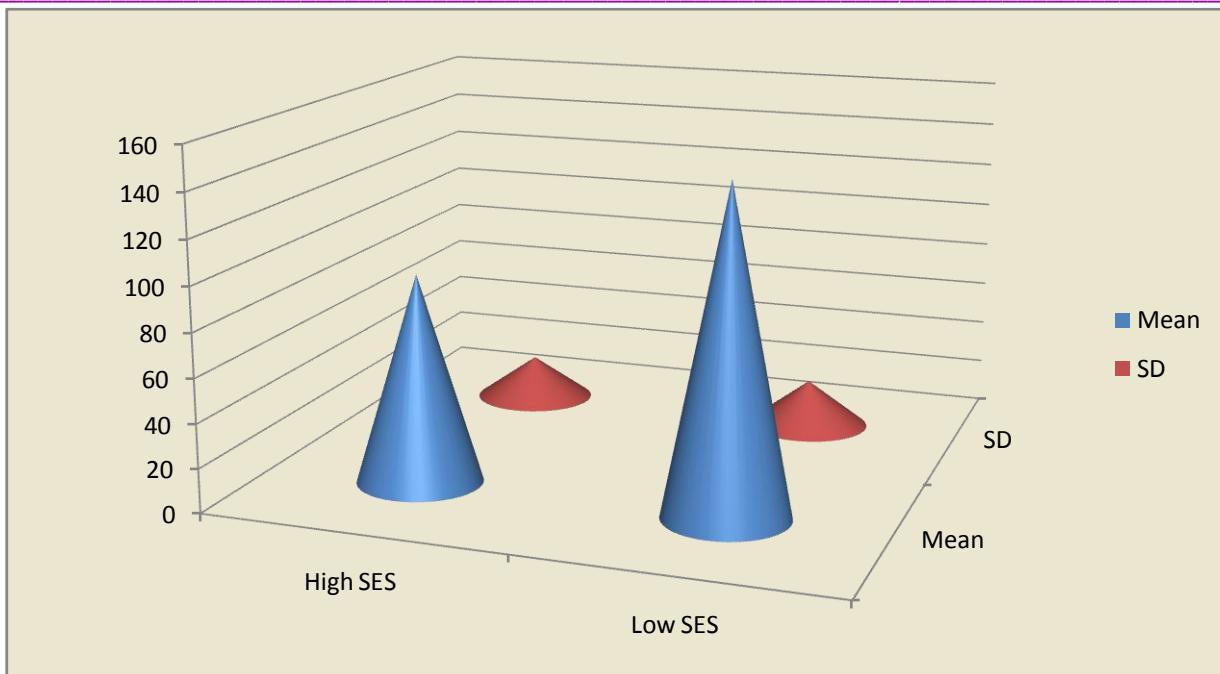

The statistical tests like , mean, Sd, and t tests used in the research study, the two groups data was compared to know the significant impact of the socio economic status on the aggressive behavior of the sports players.

### Data analysis

#### The table showing the impact of socio economic status on the aggressive behavior among the sports players

Sample	N	Mean	SD	T value
High SES	50	95.16	19.974	11.503**
Low SES	50	146.90	21.629	

Significant at 0.01 levels.

The table and graphs are showing the impact of socio economic status on the aggressive behavior of the sports players in kalaburgai district, the high socio economic group sports players are less aggressive than the low socio economic status group. the socio economic factor makes the individual mentally free and there is no need to frustration on the situations in the high socio economic status. the low socio economic sports players are more aggressive behavior due to the low social support, low family income, grade less professions and monthly income and very less property from the forefathers, the lower socio economic status sports players are more frustration in mind due to that they are more aggressive behavior than others.

### CONCLUSIONS

- ❖ There is impact of socio economic status on the aggressive behavior among the sports players.
- ❖ The high socio economic status group has the lower aggressive behavior than the counter parts.
- ❖ The low socio economic status produces the more frustration which leads the more aggressive behavior in the sports players.
