_____

ABSTRACT :

This paper explores the use of ICT in teaching ELT in the classroom by the teachers of English and how the use of ICT is perceived by the English language teachers. The paper specifically focusses on the English language teachers of Gujarat state of India. The paper explores the basis inclinations that the teachers are towards and their innate feelings of self-efficacy. The researcher would like to delineate that this study is to explore the ideological and thought processes of the teachers and tries to find a more accepting favour for the teachers of English in Gujarat state.

KEYWORDS : *English language teachers , ideological , training framework.*

INTRODUCTION

Every year as India observes Teacher's day with exhibition and revelation by praising this honourable calling with articulations of appreciation, I just marvel why this profound respect fades away for whatever remains of the year.

Poet Kabir narrated the importance of teachers in his couplet:

Guru Gobinddoukhade, kaake lagoon pay. Balihari guru aapne Gobinddiyobatay

(*Guru and God both are here to whom should I first bow? All glory be unto the guru, path to God who did bestow*).
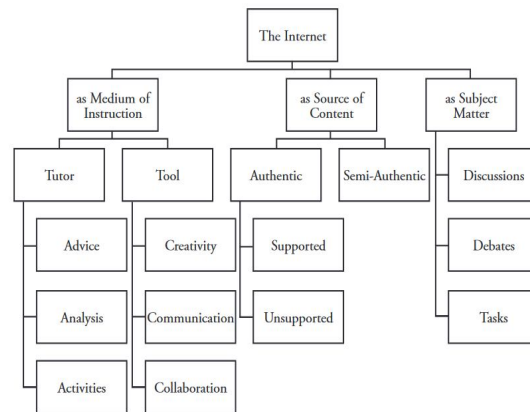

Lamentably these masters have turned into the substitute for all lacunas that our training framework is tormented with. This conveys to an essential inquiry regarding why instructors are not regarded in India and what every day fights they wage for survival independent of whether they are working in an administration school or a universal educational modules school.

English as the need of the hour:

As an instructor these are my concerns to this inquiry dependent on my own understanding and my communication with my associates. English is a seven letter word-is a mystical word known for the language, expressed by 1.5 Billion individuals of the world either as a local language, as a second language, or as an unknown dialect(Lyons, 2017). English is quickly turning into a world language. It is the main language of United Kingdom, The United States of America, Canada and Australia. Also, it is spoken and perused by a huge number of Europeans, Africans, Chinese, Indians, Japanese and South Americans as a second language. It is generally known in India, Pakistan, Burma and Ceylon, pretty much every nation of the world. So, one individual out of tenth on the planet is a local speaker of English. One out of each four on earth can be come to with it.

_____

_____

No language, antiquated or present day, can be contrasted and English in regard of its global status. English has turned out to be one of the significant dialects of the world. It is the most broadly utilized of the world is about six driving dialects. It is fascinating to take note of that around one portion of humanity has picked English to speak with the individuals who don't talk their own language. It is standing out that English aides in setting up global relations. It is a wellspring of comprehension among various countries of the world.

In a creating nation like India, a steady touch with the outside world is totally important to achieve the progressive changes in the fields of agribusiness, prescription, industry, broadcast communications, transport and fundamental research frameworks. Without the satisfactory information of English, we can't prepare our young designers, specialists, technocrats and scientists to come to hold with present day innovation in their particular fields. We need it seriously to bolster, to dress and to transport the overflowing millions in India. In the event that we know English, we can get the miracles of logical disclosures at our entryway steps.

Figure: A framework for integrating the Internet into ELT

No entrance: The Internet as topic

Absence of Internet get to does not imply that English language instructors can't coordinate the Internet specifically, and innovation all in all, into their guidance. Incompletely in antici-pation of and arrangement for future access, the following segment centersaround discourses (or discussions) and errands stressing the Internet as a theme and how they can be led without the genuine utilization of the Internet.

Reasons not to use the Internet in ELT to justify self-efficacy:

For most English language students of the world, there are points of confinement to Internet access and in this manner to its potential advantages, yet for students with Internet access, there might likewise be breaking points to the advantages. A recent analysis on the breadth of CMC research suggests that its benefits have been exaggerated (Kenning 2010). Also, a thorough examination of the exploration on CALL in essential and auxiliary school English language training correspondingly reasoned that"the evidence that technology has a direct beneficial impact on linguistic outcomes is slight and inconclusive"(E. Macaro, 2012). Among the most considered territories of this examination were CMC and the Internet. These discoveries associate with the discoveries of past meta-examinations looking at the compelling ness of CALL by and large. Besides, when you read this article, a portion of the sites referred to may never again be practical, and the advances referenced could before long be outdated. In reality, while data on the Internet is accepted to twofold generally at regular intervals, the normal life expectancy of a site is just around 77 days. Thinking about these impediments, Instead of regretting the way that our instruments are not the best in class, we should focus on utilizing the

_____

_____

current apparatuses further bolstering understudies' best good fortune while we search for approaches to acquire extra assets.

Using ICT and self-Efficacy:

Dwarfing purposes behind capability and positive components could propose that greater part of in-administration ELT understudies have elevated amounts of ICT self-viability. It could be disclosed with reference to the related writing. Most importantly, the investigation brought about the beneficial outcome of PC use involvement, dimension of PC use aptitudes, recurrence of utilization and access (the two PCs and Internet) on the understudy educators' apparent data proficiency SE. As needs be, the members in this examination demonstrated the spot of involvement, learning of aptitudes and access while singling out instructive need to utilize ICT abilities. The investigation may imagine how discernments may befuddle to the training. Discoveries in this investigation support the previously mentioned writing. All in all terms, both positive and negative variables are probably going to be watched for in-administration instructors. For example, "dynamic nature of ICT" from the ICT educators' discerning and agreed impact of ICT on the idea of instructing and learning appear to coordinate one of the positive comments in this examination about ICT reconciliation spicing up the earth with visuals and assortment of sources just as "understudy premium" announced in the two investigations. For the initial three positive elements impacting the ICT SE, the main is "I can utilize ICT for my courses" showing the familiarity with pre-servicers about the handy utilization of ICT in language classes. "Seen value and convenience" are solid determinants to imagine one's goal of PC use . Besides, brought up the significance of "saw significance of ICT" as an inspirational factor. Dissimilar to the discoveries of the examination in which educators feel more reasons and genuine encounters to be persuaded about the instructive utilization of ICT devices, members in this investigation positioned the ability to utilize ICT for instructive purposes at the best. This could be clarified as in five years, ICT may have turned out to be increasingly crucial and fundamental notwithstanding for in-administration educators. Another contrast among pre and in-administration instructors that could be deduced from the previously mentioned investigations is notwithstanding mindfulness, in-administration educators are distrustful about the advantages of ICT.

Besides, "I am/get experienced in the utilization of ICT." Though close to home utilization of ICT does not generally prompt its exchange to proficient setting as in opposition to the theory of So, that derived no immediate impact of PC use on the planned use, PC use experience could be a solid determinant of its application. Past experience has been believed to build the dimensions of PC use; instructors with PC use experience are considered to have uplifting disposition and larger amounts of information those in accordance with improved ICT SE. For example, to utilizing ICT devices for either close to home or expert purposes adds to ICT abilities as through keeping web journals amid which you have to utilize remain on the web and work on utilizing ICT. Thirdly, "My self-assurance increments." has additionally been accounted for in various research. A supporting proof for the expansion in self-assurance with respect to ICT is shown ; in their examination, fearlessness just as ICT abilities of pre-administration educators improved having utilized ICT in the instructor training program. As indicated by online journals as a normally utilized ICT apparatus helps increment the fearlessness dimensions of planned educators. Educator preparing innovation parts have been observed to be a solid factor in influencing and notwithstanding changing ICT SE dimensions of in-administration instructors and it is reflected here as the arrangement of ITMD and CALL courses marked as positive variables. The previous course covers zones of ICT based materials improvement and the last offers fourth year understudies hands-on instructing exercises mixed into hypothesis and latest updates in the field.

Then again, for the negative factors the most normally experienced "Absence of learning and aptitudes". We communicated the centrality of instructor learning that straightforwardly impacts the basic leadership forms. Extra learning and abilities required in the present setting incorporates "educational innovation coordination content information". Educators are required to think about the innovation, new strategies improving understudy learning in the ICT settings and how to choose suitable assets to achieve the learning objectives. Accordingly, as this examination proposes

_____

_____

"information and aptitudes" of educators that are exchanged or changed to understudy learning are key pointers of accomplishment in innovation joining. In accordance with these, for pre-administration educator training, "hands-on encounters with innovation, perceptions of best practices of innovation use, related readings and talks just as reflection, chances to rehearse innovation use to encourage learning". Utilizing online journals tested by applies here.

Planned instructors' view of the impacts of web journals on ICT abilities show that understudies think "blogging improved my insight and aptitudes with respect to how to utilize ICTs in my future calling " This factor is trailed by "Specialized issues". Some minor comparable issues, for example, programming or equipment related traps have been accounted for and instructors tackled issues by conveying their own workstations to the classroom as a reinforcement plan. A few further grumblings were gathered from the understudies in regards to the open doors in the research center and Internet association. Third negative factor recorded "Absence of certainty" have been widely experienced in connection to SE further includes that, notwithstanding the information and aptitudes required, self-viability alluded to as inclination fearlessness is important especially for the unpracticed and forthcoming educators. Henceforth, chances to rehearse innovation use as introductions or field encounters and getting to an assortment of models and precedents are a few proposals to upgrade SE amid the pre-administration instructor training. Along these lines, detailed that while learner instructors were "very certain" with their fundamental ICT aptitudes, they were not as sure likewise with their propelled specialized abilities. A huge increment of self-assurance in this investigation of 2007 was in regards to the utilization of email to convey.
